JOB TITLE

FULL STACK DEVELOPER Dynamic programmer proficient in Python (Flask) and JavaScript with a strong background in database management and user-centric design. Adept at fostering collaboration in development teams to build robust, scalable applications that drive innovation and deliver exceptional user experiences. Passionate about designing intuitive software solutions that streamline processes.

TECHNICAL SKILLS

Python with Flask, SQL, JavaScript, React

TECHNICAL PROJECTS

EPHARM - [Backend](#) | [Frontend](#)

- Designed and developed the frontend using React, creating a mobile- responsive UI for browsing products, adding items to cart, and checking out.
- Implemented a **Flask-based API** for backend functionality, including user authentication, product catalog management, and order processing.
- Utilized **SQLite** for database management, organizing product data, user details, and order history efficiently.
- Integrated **MPESA stk-push** for fast and efficient payment processing by prompting customers.
- Conducted extensive testing with tools like **Postman** and **pytest**, ensuring bug-free and reliable functionality.

AJALI - [Github](#)

- The frontend is designed using React, enabling users to report accidents and emergencies by uploading pictures while accurately tracking their locations.
- The backend is implemented using a Flask- based API that authenticates users and processes reports.
- Utilized **SQLite** for database management, organizing product data, user details, and order history efficiently.
- Integrated **MPESA stk-push** for fast and efficient payment processing by prompting customers.
- Conducted extensive testing with tools like **Postman** and **pytest**, ensuring bug-free and reliable functionality.

ELIMIKA - [Backend](#) | [Frontend](#)

- The frontend is designed using React enabling users to interact with educational materials and carry out subscriptions or purchases.
- The backend is designed using Flask and enables authentication of users, resources CRUD and payment processing.
- Utilized **SQLite** for database management, organizing product data, user details, and order history efficiently.
- Integrated **MPESA stk-push** for fast and efficient payment processing by prompting customers.
- Conducted extensive testing with tools like **Postman** and **pytest**, ensuring bug-free and reliable functionality.

EXPERIENCE

I have extensive experience working with frontend and backend technologies to build personal projects.

EDUCATION

Flatiron School

Full Stack Web Development, Python with Flask and JavaScript programming

Rongo University

Bachelor of Education, Arts 2021
